

Figure 3: Tax Cases on the Supreme Court's plenary docket, 1912–2000 terms. N=991. The top panel shows the number of cases; the bottom panel shows their proportion.⁸⁷

87. The N for this figure is indeed 991, not 922. For an explanation, see Part IV, *infra*.

and a decline in the use of legislative history, has occurred over the last decade or so.

We will shortly jump into this controversy, comparing the Court’s reliance on textual and historical evidence. For now, we ask whether the use of textual canons has varied over time, as some commentators suspect. Figure 5 provides the answer, and it is quite interesting in light of existing debates.¹⁰⁸ Prior to the 1970s, with some term-by-term variation, the Court analyzed the Code’s text in no more than 50 percent of the cases.¹⁰⁹ Beginning in the mid-to-late 1970s—that is, well before Scalia arrived at the Court¹¹⁰—that picture changed dramatically: the majority of decisions, and in some terms the vast majority, relied in part or in full on a textual approach. Put another way, during the longest natural court when Earl Warren was Chief Justice (1958–61 terms),¹¹¹ the majority examined the text in 47.06 percent of the 34 cases it decided. That figure is above the overall mean of the entire series (39.46), but it is well below the percentages for the longest periods of membership stability during the Burger (1975–80 terms) and the Rehnquist Court’s (1994–00 terms), of 62.07 (N=29) and 72.22 (N=18), respectively.

108. It is important to note that because we coded all rationales on which the opinion writer claimed to have relied, it is possible the justices relied on one or more approaches in addition to the various text-based canons we depict in Figure 5.

109. We use windows of six terms, rather than single terms, to ensure at least ten cases on which to base the illustrated proportions.

110. But see Figure 7 for a somewhat different (comparative) take on the data.

111. A natural court is a period of stability in Court membership. *See, e.g.*, Youngsik Lim, *An Empirical Analysis of Supreme Court Justices’ Decision Making*, 29 J.
